

**The world outside your window isn't broken.**

**Our view of it is.**

**Spatial computing and digital twins**

**Sovereignty – economy - society**

**Jeroen Zanen – Founder & CEO, AI-InfraSolutions - Spatiall**

# **The old way is holding us back**

**Point clouds. Not perspective**

**Data locked in silos – often not  
sovereign  
Data, not intelligence**

**Slow, costly, complex**

## **Why this moment matters**

**National security drives investment**

**The ambition is self-sufficiency**

**Only a few get access to a lot...**

**Fragmentation blocks scale**

**An inflection point -> a system change**

# **System change entails examining complex social systems.**

**A social 'system' is a coherent system of:**

**thinking (values and ideas),**

**organizing (structures and networks),**

**- and actions (routines and behavior)**

# **Sovereignty**

**Sovereign by design.**

**Captured data controlled and stored locally**

**Intelligence governed locally**

**Control stays in-country**

**Peter Rabley – OGC “Sovereignty without interoperability is isolation”**

# Economy

**Turn geospatial data into direction.**

**Capture once, create value multiple times**

**Democratize nationwide data sets as starting point....**

**Create new long term public-private partnerships**

**Build new local business models**

# **Society**

**Protect what is already there.**

**Every broken traffic sign. Every crack in the pavement. Every sagging power line.**

**Listen to local needs and problems**

**Water – energy – people – rising costs -  
resilience**

# **Spatial Computing & Digital Twins**

**From service to sensor.**

**Real world → real signals**

**Signals → real intelligence**

**Intelligence → faster decisions**

## The Movement

**Spatiall is not just another solution. But a movement.**

**A global network of local pioneers**

**Partners who know their territories**

**A new way to see & understand all dimensions**

## **The model: local Public-private partnerships, global learning**

**Public  private partnerships**

**Local private capital**

**Local control of critical assets, data &  
intelligence**

**“We’re building a global ecosystem for geospatial  
intelligence, powered by local partners.”**

## Why we exist

**To break down the old systems that keep geospatial intelligence locked away... and put that power in the hands of those who build a safer and more sustainable world around us.**

**A world where data is no longer owned, but shared... unlocking new ways to see, plan, design, (re)build, protect and maintain the world around us.**

# UNLOCK THE UNSEEN.

**Because if the world looks the same tomorrow, we've failed.**

**Spatiall — Unlock the unseen**
